Wright R-2600

designed for B-25 Mitchell RC Model from 3D Labprint

Printed model of the Wright R-2600 radial engine designed for B-25 Mitchell RC Model from 3D Labprint Ready for electromotor size 3542

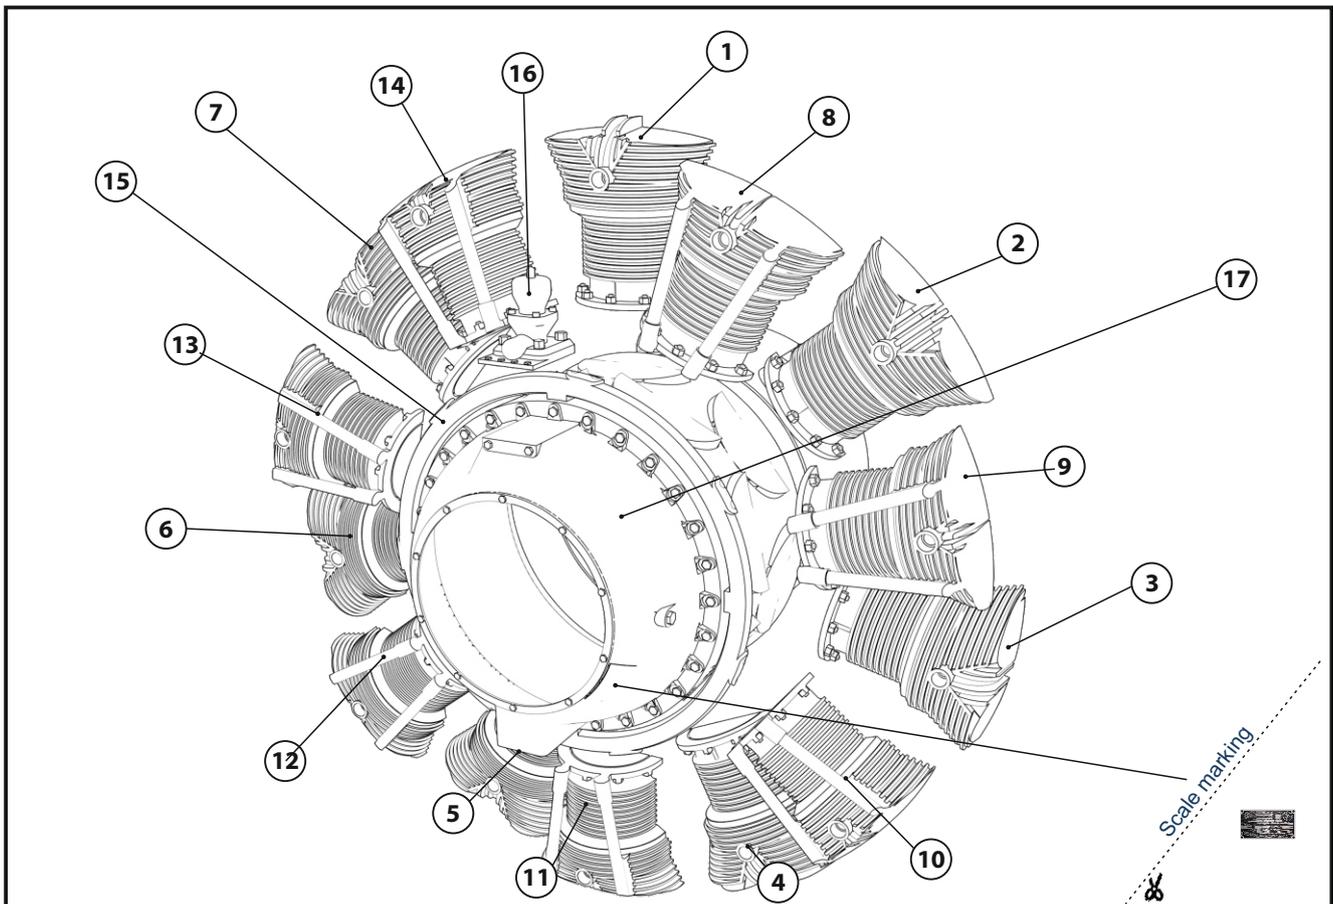

What you will need:

- 3D Printer (see recommended printers on Print-beat web site)
- STL product files
- PLA filament (see recommended filament on Print-beat web site)
- Superglue + accelerator

Recommended printer setup for Prusa Mk 2-3 :

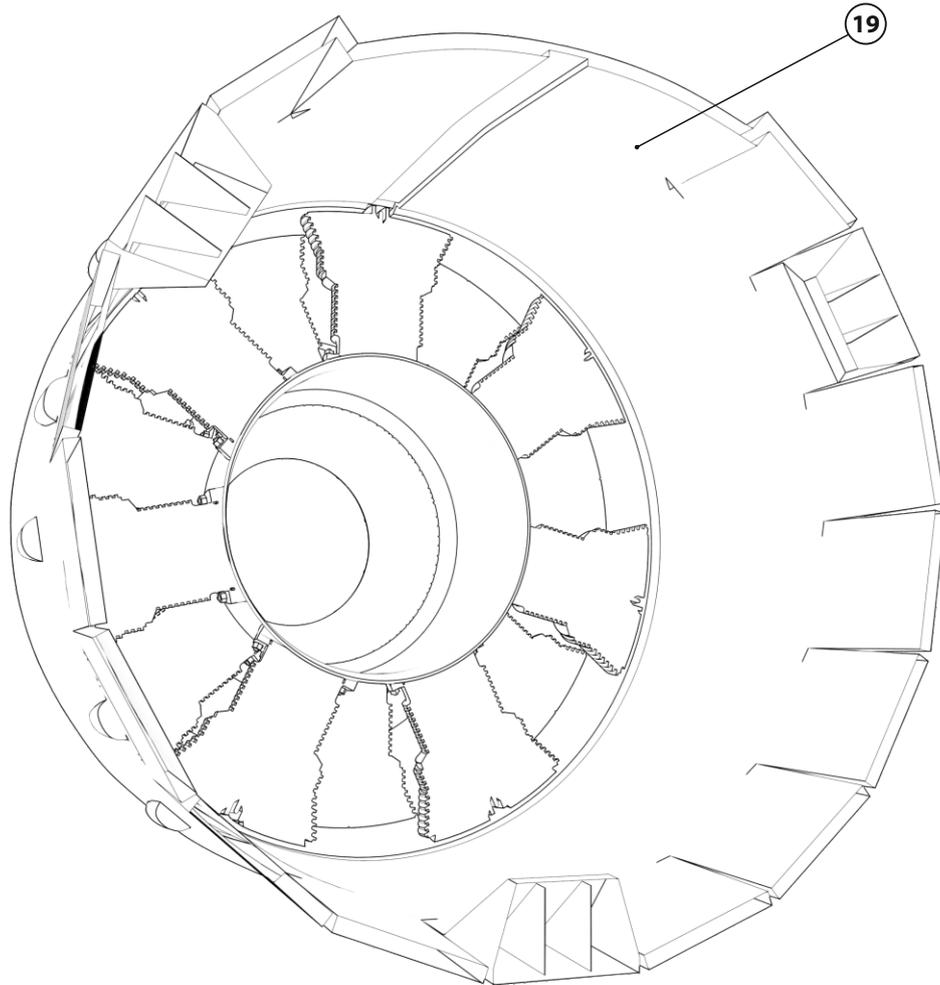

- Layer height: 0,2 mm, Nozzle diameter: 0,4 mm
- Solid layers for objects 1-19: Top: 3, Bottom: 1
- Temperature of bed 60°C
- Temperature of nozzle 210°C

Parts list Wright R-2600							
no.	Parts name	Color	Weight	infill	Perimeters	Support	Extr. Multiplier
1-7	cylinders back	silver	1,2g	0%	2	no	0,83
8-14	cylinders front	silver	1,2g	0%	2	no	0,83
15	ring	silver	1g	0%	2	no	1
16	magneto	black	1g	5%	2	no	1
17	body	grey	6,4g	5%	2	no	0,83
18	stabilizer		4g	0%	2	no	0,88
19	engine cowling (print beat)			0%	1	no	0,92

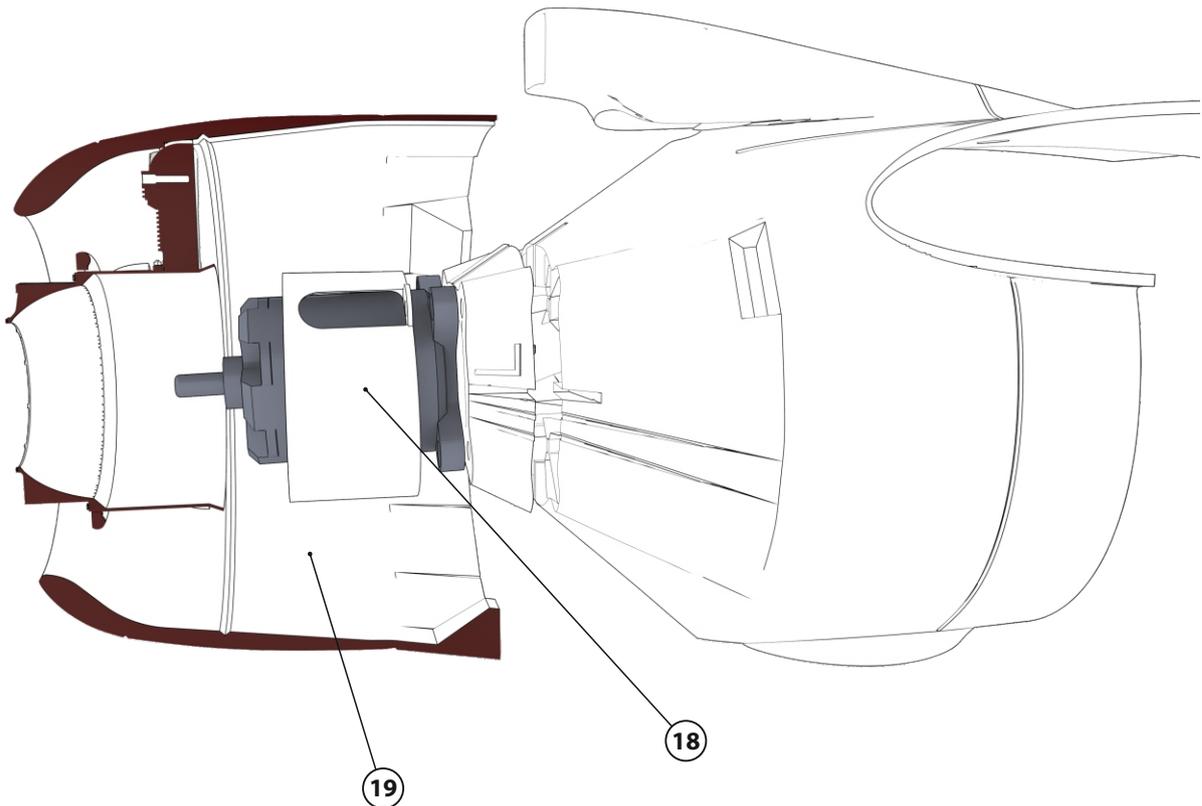

Correct model position:

Adjust the engine cylinders to the correct position using the grooves in the engine cowling

Glue the model Writhe R- 2600 and the engine cowling

Stabilizer installation:

Attach the stabilizer (18) to the electric motor and screw the assembly to the nacelle and put the engine cover on the nacelle.
